pc.gammacount: The PC prior for $\theta = \log(a)$ in the $\Gamma(a,1)$ distribution with base model a=1

Parametrization

This is the PC prior for $\theta = \log(a)$ in the $\Gamma(a,1)$ distribution¹ distribution where a=1 is the base model.

Specification

This prior for the hyperparameter is specified in the hyper-spesification, for $\theta = \log(a)$ it is

```
hyper = list(<theta> = list(prior="pc.gammacount", param=c(<lambda>)))
```

Example

Notes

See also functions inla.pc.{d,p,q,r}gammacount which gives the same PC prior, but for a instead of $\theta = \log(a)$.

This function is experimental.

¹Where $\Gamma(a,b)$ has mean a/\overline{b} and variance a/b^2 .
